

HYRA[®]
SKI CLUB PROGRAM

Ski Club Program

SKI PERFORMANCE INNOVATION

HYRA is an Italian Brand of skiwear equipment, it comes from the passion of skiing and the aim to provide technical products with a modern and Italian looking design. Some lines are dedicated to Ski clubs and Ski schools and are created using high technological innovations and latest generation materials.

COLLAB WITH LABORATOR LART

All our fabrics, membranes, padding and garments are tested by Lart laboratories with whom we collaborate to ensure that our standards are always maintained at the highest level. We want to communicate clearly and visually the waterproofing, thermal properties and breathability of our garments, to ensure that every user finds what best suits their mountain activities.

- **Waterproofing** (water column): the higher the value, the better the protection against rain and snow.
- **Breathability**: the higher the value, the more effective the dispersion of moisture generated by the body during activity.

Water columns- Waterproofing (mm)

Value	Description	Pictogram
0 - 1.000 mm	Slightly water-repellent fabric, not suitable for outdoor activities.	
5.000 mm	Water-repellent fabric, can withstand low pressure: if you sit on wet surfaces, you will get wet.	
10.000 mm Rain resistance 3h+	Water-repellent fabric, resists medium pressure and is ideal for skiing on humid, snowy, or slightly rainy days (a few hours of exposure).	
15.000 mm Rain resistance 6h+	Water-repellent fabric, withstands heavy rain and wet snow for prolonged periods. Also suitable for brief submersio	
20.000 mm Rain resistance 8h+	Completely waterproof fabric , no water passes through under any condition.	

Breathability – Inner membrane (activity)

Value	Description	Pictogram
10.000 g/ m ² /24h	Suitable for normal activity.	
15.000 g/ m ² /24h	Ideal for medium-intensity activities.	
20.000 g/ m ² /24h	Perfect for high-intensity activities , such as mountaineering or high-performance skiing.	

Ski Club Reference

SCI CLUB CORTINA

HYRA has developed a suit dedicated to the Cortina Ski Club, combining the most advanced technologies with extremely functional and versatile garments with a young and modern look. Construction of the highest level with a high degree of insulation, warmth and breathability.

Workers Reference

Operators from **LISKI SPORT EQUIPMENT**, a leader in ski slope safety and Official Partner of the Milano Cortina Olympic Games, wear Hyra across the Olympic venues of **Cortina d'Ampezzo, Bormio and Livigno**.

This collaboration led to the development of a **high-performance professional technical system**, engineered with advanced material technology to ensure maximum reliability in extreme alpine environments.

MATERIALS & CONSTRUCTION

The set is built using:

High-density, abrasion-resistant technical fabrics, developed for intensive professional use

30K/30K waterproof & breathable membrane for total weather protection and optimal moisture management

Multi-layer construction with high-efficiency thermal insulation

Kevlar® structural reinforcements in high-stress areas

Next-generation **Durable Water Repellent (DWR)** treatment

BIB PANT – HEAVY DUTY PERFORMANCE

The multi-pocket bib pant features:

Kevlar® structural reinforcements in high-stress areas

Heavy-duty anti-abrasion reinforced panels

Ergonomic construction for dynamic operational movement

High mechanical stability materials

Built to withstand continuous professional use in demanding environments

Engineered to deliver **structural strength, advanced technical protection and long-term professional performance** under the most extreme conditions.

HMG1503

100K JACKET MAN

High-performance technical jacket developed for intensive sport and professional use.

FABRIC

Constructed in 4-way mechanical stretch fabric, made from 100% recycled polyester, with **abrasion resistance up to 100.000 cycles**.

30K/30K fabric and lamination (WP 30.000 mm – MVP 30.000 g/m²/24h) ensures total waterproof protection and maximum breathability even in extreme conditions.

THERMAL INSULATION

Polyester insulation featuring **Sorona® Aura technology plant-based recycled padding** : 100 g body, 80 g sleeves, 40 g hood

Differentiated insulation mapping optimizes warmth, lightness and freedom of movement.

Technical nylon lining enhances comfort and smooth layering during activity.

REINFORCEMENTS & VISIBILITY

Kevlar shoulder reinforcements

Reflective prints for increased visibility

TECHNICAL CONSTRUCTION

Fully taped seams (all over)

Waterproof zippers, including double-opening front zipper

Hyra Air Vent System (neck and shoulders ventilation)

Ergonomic pre-shaped sleeves, Adjustable cuffs with internal Lycra wrist gaiter

Internal resin-coated snow gaiter

Durable Water Repellent (DWR) treatment

FUNCTIONAL FEATURES

4 front pockets, including multifunction radio pocket with microphone attachment

Rear bottom pocket, security inner pocket

3D internal mesh for moisture management

Internal drawcord adjustment (accessible from pocket)

Internal opening for easy customization Service zip

MAN
SKI CLUB LINE

Built for the Mountain. Engineered for Operators

Developed for slope operators and lift system workers, this technical work bib pant combines structural reinforcement, targeted insulation and advanced operational functionality.

Built to withstand extreme alpine environments and continuous professional use.

FABRIC

Constructed in 4-way mechanical stretch fabric, made from 100% recycled polyester, with **abrasion resistance up to 100.000 cycles.**

30K/30K fabric and lamination (WP 30.000 mm – MVP 30.000 g/m²/24h) ensures total waterproof protection and maximum breathability even in extreme conditions.

THERMAL INSULATION

Polyester insulation featuring **Vivo Teknica 60g**

Lightweight, balanced warmth **Designed** for both **static** and **dynamic** work **conditions**

STRUCTURAL REINFORCEMENT SYSTEM

Kevlar® structural reinforcements in high-wear areas

Reinforced ballistic fabric insert at lower back hem

Heavy-duty construction engineered for long-term professional durability

Maximum abrasion resistance against snow, ice and technical surfaces.

REMOVABLE KNEE PROTECTION SYSTEM

The key technical advantage:

Removable knee protection system compatible with professional-grade inserts

Würth knee protectors Ergopad style nr. M437484999 selected as the most ergonomic and functional solution for operational use

Certified protection DIN EN 14404 with optimized mobility during kneeling and technical work activities. **Knee protectors not included in the pant Bib.**

OPERATOR-FOCUSED FUNCTIONALITY

Technical storage system engineered for professional efficiency:

Chest pocket with hidden reverse coil zip

Internal pen holder, Side pocket with inner warmer area, Bellows pockets for increased capacity

Velcro flap pocket, Multi patch pocket , 2 front loops, Hidden side opening, Integrated screwdriver holder, Personalized heavy-duty elastic braces

Every detail is designed to ensure fast access and operational efficiency on the mountain.

SKI CLUB SOFTSHELL JACKET

Built for Motion. Engineered for Wind Protection.

Designed for dynamic ski club activity and mid-season alpine conditions, this Softshell Windstopper Jacket delivers lightweight weather resistance, breathable comfort and ergonomic freedom of movement. Built to move. Built to protect.

FABRIC

10K / 10K WEATHER CONTROL

Water resistance: **10.000 mm**

Breathability: **10.000 g/m² / 24h**

4-way stretch performance fabric

100% polyester construction

Engineered to provide wind protection and light weather resistance while maintaining optimal breathability during active use.

LIGHTWEIGHT INNER PERFORMANCE

100% nylon mesh lining

Enhanced airflow circulation

Moisture management support

Optimized for high-output movement and transitional weather conditions.

ERGONOMIC PERFORMANCE DESIGN

Breathable softshell construction

Lycra inner wrist cuffs

Elastic grip at bottom hem

Asymmetric neck closure for enhanced protection

Side ventilation openings

Designed to follow natural body movement while ensuring secure fit and wind control.

SHORT TRAINING PANT
SKI CLUB LINE

Built for Speed. Engineered for Training Performance.

Developed for intensive ski training sessions, these technical training shorts combine weather resistance, ergonomic stretch construction and race-ready functionality. Designed to move fast. Designed to layer efficiently over race suits.

FABRIC

10K / 10K WEATHER CONTROL

Water resistance: **10.000 mm**

Breathability: **10.000 g/m² / 24h**

4-way stretch performance fabric

100% polyester construction

Engineered to provide wind protection and light weather resistance while maintaining optimal breathability during active use.

PERFORMANCE SOFTSHELL CONSTRUCTION

Heavy breathable softshell structure

Lycra stretch inserts for enhanced flexibility

Full-length side zip openings on thighs

Engineered for rapid on/off transitions and unrestricted dynamic movement during gate training.

ERGONOMIC SUPPORT SYSTEM

Durable personalized suspenders

Detachable braces for versatile use

Braces with breathable 3D mesh window

Integrated brace anchorage garage

Elastic grip at back waist

Designed to ensure stability, secure fit and ventilation during high-intensity sessions.

MANTLE TRAINING
SKI CLUB LINE

Built for Coverage. Engineered for All-Weather Training.

Designed for intensive training sessions and variable alpine weather, the Mantle Overall Raincoat delivers full-body protection, lightweight performance and functional race-ready construction.

Built to shield. Built to move.

FABRIC

15K / 15K WEATHER SHIELD – 3 LAYER CONSTRUCTION

Waterproof rating: **15.000 mm**

Breathability: **15.000 g/m² / 24h**

3-layer technical fabric

100% nylon construction

Fully seam taped

Engineered to provide reliable rain and wind protection while maintaining internal breathability during active training.

FUNCTIONAL STORAGE & FIT CONTROL

Large front storage pockets

Adjustable waist with drawstring regulation

Adjustable cuffs with velcro closure

Optimized for quick access, secure fit and adaptability in changing weather conditions.

Engineered to deliver full-coverage protection, functional versatility and dependable performance during demanding training sessions.

SKI CLUB LINE

Built for Speed. Engineered for Precision.

Developed for competitive alpine racing, the Cortina Racing Suit combines advanced stretch performance, aerodynamic fit and elite-level moisture management. Designed to move as one with the athlete. Built to win.

FABRIC

HIGH-PERFORMANCE RACE FABRIC

Premium **Schoeller® 2-way stretch fabric**

Composition: 76% polyester / 13% elastane / 11% polyurethane

Wind and water repellent

Made in Italy

Engineered for durability, elasticity and consistent performance under race conditions.

ADVANCED DOUBLE-FABRIC CONSTRUCTION

Technical double-layer structure

Synthetic outer fibres for durability and protection

Functional inner fibres for rapid moisture transport

Permanent elasticity retention

Optimized for high-output racing environments and maximum comfort at speed.

ANATOMICAL RACE FIT

Anatomically designed contour fit

Engineered sublimation print design

Front zip closure

Thumb anchorage system

Elastic grip at hem

Precision fit designed to enhance aerodynamics and muscle support.

MAN
MULTISPORT

Built for Layering. Engineered for Thermal Precision.

Designed as a high-performance second layer, the Tenderfoot Man Vest delivers lightweight insulation, wind protection and ergonomic stretch construction for dynamic alpine activity. Built to adapt. Built to move.

FABRIC

100% nylon cirè full dull fabric
Water repellent finish
Wind-resistant construction
Integrated power stretch side panels
Engineered to provide core protection while maintaining breathability and mobility.

TARGETED THERMAL INSULATION

100% polyester insulation
80 g body fill
Optimized warmth distribution for cold alpine conditions without added bulk.

PERFORMANCE FIT & CONSTRUCTION

Tight, ergonomic shape
Sleeveless design for unrestricted arm movement
Power stretch panels on sides
Elastic finish at hem and arm openings
Designed for precision layering under a shell or as a standalone technical mid-layer.
